SOLOMIX 1

SOLOMIX 1

Mixer feeder wagons model 500 - 1400

Trioliet feeding technology | since 1950

Feeding with perfect precision

Trioliet was established by the three Liet brothers in 1950. This family business specialises in the development, production and delivery of mechanised and automated customised solutions for the feeding of ruminant livestock. Sustainability and efficiency are important objectives for modern and professional dairy and beef farmers. The latest technological innovations are used in the development of the machines. Trioliet has various patents in its name, which not only make the machines unique, but also extremely efficient and user friendly. Feeding with perfect precision is the rationale we base everything on and this fits in with the wishes and needs of modern livestock breeders and contractors.

Solomix 1

Compact, but spectacular in performance

The Solomix 1 is a compactly constructed mixer feeder wagon and can be delivered with a capacity from 5 up to 14 m³/180-500 cu.ft. For both large and small livestock breeders and for every specific situation Trioliet has the appropriate mixer feeder wagon. The Solomix 1 can be made to measure, if desired. Its specific characteristics and high quality make the mixer feeder wagon unique, efficient and very easy to work with.

are self-sharpening and the special shape lead up to a higher strength

and long life.

Solomix 1

Higher milk production and healthier livestock

The mixing auger and the mixing tub have been well developed through technically. The mixing tub is provided with robust walls which are highly wear-resistant. The special wear strip ensures greater stability and resistance to wear at the bottom of the mixing tub, where the pressure on the tub wall is the greatest. The unique 'Twin stream' auger has two symmetrical dispenser arms, which ensure that the feed is discharged quickly and evenly. Even small mixtures are mixed quickly and accurately because of this. This leads to a higher milk production and healthier cows.

Precision requires advanced instruments

Healthy livestock demands the best feed available. Apart from this, accurate and proper feeding saves costs and is less stressful on the environment. An indispensable option on every Solomix 1 mixer feeder wagon is the 'Triotronic' electronic weighing system. This is a standard fitting with three robust weighing bars, which ensure maximum stability. At every weighing bar two measurements are taken. The average value calculated ensures optimum precision. The stable produced weighing bars are insensitive to peak loads while moving. The digital weight indicator is well protected by its shockproof, watertight housing.

Optimum discharge

Trioliet Feed Management system for efficient feeding

The Solomix's weighing equipment can be extended with the advanced Trioliet feed management program 'TFM Tracker'. With this system, rations can be programmed, optimised and controlled - an optimum system enabling very exact feeding.

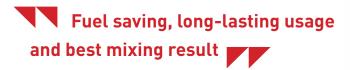

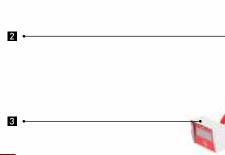

The perfect solution for any farm situation

The Solomix 1 is available in different options. The front unloader is available from 7 to $14 \text{ m}^3/250\text{-}500$ cu.ft. in three different discharge options. For the discharge, there is a choice of various possibilities: a synthetic conveyor belt, a conveyor chain, a curved conveyor chain or side discharge doors. Side discharge is an excellent choice for any standard situation. The machine with side discharge is also available as Solomix P1, fitted with a straw blower to distribute straw in deep litter stables and in cubicles. For any situation, such as low temperatures, small or wide feed alleys, or feeding troughs, an appropriate choice can be made.

Unique features Solomix 1

- Unique mixing tub for a perfect mix | The shape and the dimensions of the mixing tub and mixing auger match optimally. This ensures a perfect, homogenous mix and a maximum filling rate.
- 2 Wide observation window for perfect view at the mixing process | Not for all models.
- Unique 3-point weighing system | Three heavy duty weigh bars provide maximum stability. Every weigh bar has double sided strain gauges for maximum accuracy. The weight indicator is placed in an rugged indicator case of high-impact durable matertial.
- Unique bearing construction | The auger bearings include a large maintenance-free conical roller bearing at the top and a sinter sleeve bearing at the bottom. This bearing construction will absorb all axial and radial auger forces. The large bearing distance ensures maximum stability and a long life.
- Integrated chassis for long life time | All Trioliet mixer feeders have a very stable auger construction, supported on the chassis. As a result all forces on the mixing auger are directly absorbed by the chassis.

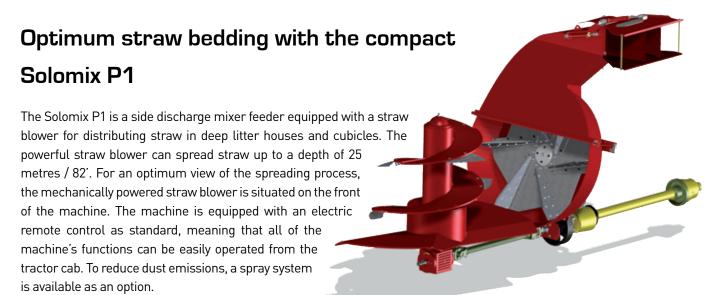

- Trioform auger knives: less resistance, less fuel | The patented shape of the auger knives reduces the resistance. Because of this, fuel is saved. The Trioform auger knives are also self-sharpening and the special shape lead up to a higher strength and long life.
- Stronger and hard-wearing auger through overlapping welding.
- 1 Twin Stream auger | The optimum auger shape of the Twin Stream auger guarantees a quick and homogeneous mixing action at a low power requirement (low diesel consumption). No wasted space and higher capacity of cubic metre age because of slim auger body. Even and quick discharge caused by the two symmetrical dispenser arms. This even applies to small mixtures.
- Trioliet wear ring for stability and long life time | The special Trioliet wear ring ensures a long life of the mixing tub.
- Special Troiliet tires | Sturdy Trioliet tires underneath the mixer feeder wagon ensure a low machine height. These mixer feeders are very suitable for skid loader and fit in low barns.
- Rubber hay ring | The flexible solution for high dry matter and long material.

Solomix P1

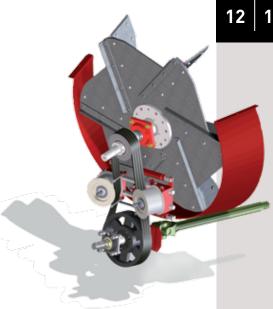

Simple and reliable drive

The straw blower is equipped with a mechanically powered turbine. The turbine is located at an angle directly on the mixer cart without the intervention of additional components or a gear box. This therefore allows for a compact method of construction. The turbine is extremely efficiently powered via several drive belts (after work is finished, the turbine can slow down and come to a standstill on its own without having to place any extra strain on the drive train). The blow/ejection wheel is fitted with detachable blades in order to make maintenance simple. The discharge opening of the blowing pipe is hydraulically operated in terms of both its height and width, so that straw can be spread in every desired area of the stable.

Solomix 1

The standard model is complete

All Solomix 1 mixer feeder wagons are fitted with 1 mixing auger, long-lasting auger bearings and a stable auger base, which is supported by a solid chassis. The shape and the dimensions of the mixing tub and mixing auger match optimally. This ensures a perfect, homogenous mix and a maximum filling rate. The Solomix 1 series can be delivered in various discharge options at the front, side or rear of the machine.

Discharge units

VLH = Front discharge

В = Conveyor belt

= Conveyor chain

C = Curved conveyor chain

ZK = Side discharge doors

= Straw blower/bedder

If desired, any VLH type can be fitted as an option with a side shift, whereby the entire discharge unit can be pushed into a sideways direction.

Accessories

< Magnet kit with hanging magnets

< Reduction gearbox

< Adjustable chain conveyor

< Cross conveyor belt at the rear (ALH-B)

< Rubber hay ring

< Chain conveyor with side-shift

Solomix 1 | 700 - 1400 | VLH - B

Standard features

- 1 Twin Stream auger
- Wide-angle PTO shaft
- Control by bowden cable
- With hydraulic brakes
- Adjustable and reversible drawbar
- Cross conveyor belt at the front (VLH-B)
- 2 restrictor blades
- Two wide single wheels
- Wear ring
- Trioform auger knives
